FUZAILVERSE

Privacy Policy

General policy for FuzailVerse apps and digital services

Effective date: 31 October 2026 | Last updated: 31 October 2026

REVIEW BEFORE PUBLICATION — This is a platform-wide framework, not a claim that every app collects the same data. Verify each app's permissions, SDKs, network traffic, storage, retention and deletion. Play Console Data Safety and Apple privacy disclosures must match the actual release.

1. Scope and operator

This Privacy Policy applies to mobile applications, websites and related digital services published or operated under the FuzailVerse name (the “Services”). Features and data practices may differ between Services. An app-specific notice, where provided, explains additional details for that app.

Privacy contact: **mohdfuzail.dev@gmail.com**. Before publication, the operator should add any full legal name and postal address required by applicable law.

2. Information that may be processed

Information you provide: Depending on the Service, you may submit text, files, images, feedback, support messages, account details or other content needed for a feature.

Device and technical information: Depending on the app and its SDK configuration, this may include device model, operating system and app version, language, time zone, app-instance identifiers, IP address, diagnostic events, performance information and crash logs.

Usage information: Analytics tools may record feature use, screens viewed, session events and interactions. The precise events and identifiers depend on the app implementation and consent settings.

Permissions and sensor data: An app may request camera, microphone, location, photos/media, notifications, Bluetooth or file access when needed for its features. The app should explain the purpose when requesting permission. A permission being available does not necessarily mean the data is uploaded to FuzailVerse.

Content handled by app features: Content may be stored locally, processed by a FuzailVerse server, or shared with a service you select. The relevant app-specific notice must state which applies.

3. Purposes of processing

We may process information, where applicable, to provide app features; save preferences or history; respond to support requests; diagnose crashes and performance issues; maintain security; prevent abuse; understand aggregate usage; improve the Services; and comply with legal obligations.

4. Local storage, servers and sharing

Some apps store settings, history or generated content locally on your device. Other apps may use cloud storage, backend APIs or third-party platforms. Local information may be removed using in-app controls, clearing app data or uninstalling the app, subject to device backup and restore behaviour.

We do not sell personal information. Information may be disclosed to service providers supporting a Service (such as hosting, analytics, crash reporting, authentication, maps, payments or customer support), when you direct us to share content, when required by law, or to protect users and the Services. The providers actually used must be reflected in the relevant app-specific disclosures.

5. Analytics and crash reporting

Some FuzailVerse apps may use Google Firebase Analytics and Firebase Crashlytics. Depending on configuration, these services may process app events, app-instance identifiers, device and app information, crash traces and diagnostic data. Not every FuzailVerse app necessarily uses these services.

See Firebase privacy and security and Google Privacy Policy. Actual collection depends on SDK versions, configuration, consent controls and the released app.

6. Advertising and purchases

Some apps or releases may be ad-free; others may use advertising services such as Google AdMob. Where advertising is used, the relevant app-specific notice and app-store disclosures must identify the advertising SDKs and explain applicable data processing and consent choices. Do not assume all FuzailVerse apps display ads.

If a Service offers in-app purchases or subscriptions, payment details are generally handled by the applicable app store or payment provider, whose terms and privacy policy also apply.

7. Retention and deletion

We retain information only for as long as reasonably necessary for the purposes described, unless a longer period is required or permitted by law. Retention varies by app, data type and service provider.

You may be able to delete local information through app controls or device settings. For account-based Services, use any available in-app account deletion feature. You may also contact us. Uninstalling an app does not necessarily delete information already held by third-party providers or backups.

8. Security and international processing

We use reasonable technical and organisational measures appropriate to the nature of the information and Services. No method of electronic storage or transmission is completely secure.

Service providers may process information in countries other than your own. Where required, appropriate safeguards should be used for international transfers.

9. Children's privacy

Unless a Service expressly states otherwise and has been designed and reviewed for that purpose, FuzailVerse Services are not directed to children. Store age ratings and target-audience declarations must be accurate. We do not knowingly collect children's personal information in a manner prohibited by applicable law. A parent or guardian who believes a child has provided information may contact us.

10. Your rights and choices

Depending on your location and applicable law, you may have rights to request access, correction, deletion, restriction or portability of personal information, or to object to certain processing. You can also control device permissions and use available app controls.

To make a privacy request, email mohdfuzail.dev@gmail.com and identify the app and nature of your request. We may need to verify your request.

11. Changes and app-specific disclosures

We may update this policy when Services, SDKs or legal requirements change. The “Last updated” date should be revised when material changes are made. Each app's store listing and in-app privacy link should point to an accessible current version.

Before releasing an app, its permissions, SDKs, collected data, purposes, sharing, storage, retention, deletion and network behaviour must be reviewed. Google Play Data Safety and Apple privacy disclosures must match the actual

released build.

12. Contact

For privacy questions or requests, contact FuzailVerse at mohdfuzail.dev@gmail.com.
